

### Fire Alarm Pull Station

In the event where fire or smoke has been detected by an individual that person should immediately pull the nearest fire alarm pull station and call 911 Campus Police. (See example).

### Fire Alarm Device

The primary means of emergency notification is the audible (bell/horn/buzzer) and/or visual blinking (strobe light) signal/alarm systems located throughout buildings on campus (See example).

- Most buildings are protected by automatic sprinkler systems and others are provided with fire standpipe systems.
- All major buildings are equipped with automatic fire detection and alarm systems, which are constantly monitored at the respective University Police Department Dispatch stations.
- Special hazards, such as chemical storage, high voltage electrical, cooking, spray painting and computer installations are protected by fixed suppression systems in addition to the aforementioned types of built-in protection.
- There are no fire hoses for building occupant use located in any University building; only fire hose connections for fire department use exist.
