- 9-10:00am **Poster Presentations:** Campus Center Main Event Room
- 9-11:00am **Welcome Breakfast:** Campus Center Main Event Room
- 10-1:00pm **Oral Presentations:** Campus Center Meeting Room 1, 2, 3, 5 and the Theatre
- 11-1:00pm **Refreshments:** Campus Center Main Event Room

9:00 – 10:00

CC Main Event Room

Breakfast and POSTER PRESENTATIONS (see poster section for descriptions)

Time	Rm #	Presenter (s)	Title	Discipline
10:05 – 10:30	CC1	*Kalibatseva, Zornitsa – SOBL Molly Arnold	Are "superwomen" without social support at risk for postpartum depression and anxiety? <i>This project examines the relationship between social support, perfectionism, postpartum depression and anxiety using an online questionnaire.</i>	◆ Health
	CC2	** *Demitroff, Mark – NAMS	Earth, Wind, & Ice: Ancient Climate Change to Periglacial Landscapes <i>South Jersey's cold, dry, and windy Ice Age legacy has few modern terrestrial equivalents. Climate-driven movement of freezing and thawing ground, along with strong winds from the nearby Laurentide Ice Sheet, have helped to fashion the local terrain into the unique world-renowned landscape that we value today as the Pine Barrens—and providing critical habitat for rare, threatened, and endangered plants and animals.</i>	◆ Science
	CC3	** *Cross, Pam – GENS Youngblood, Lisa – GENS Ryan, Emily – GENS Ehrenfeld, Dan – GENS	FRST Peer Mentoring/TA Project: From At-risk to Role Model <i>In this project, members of the First Year Studies Program selected successful students from their fall FRST classes to work as peer mentors/teaching assistants in the same class during the spring semester. The students in these spring semester classes benefited from the extra one-on-one support; that was an expected outcome of this high impact practice. However, this was also a transformative experience for the first-year students chosen as Mentor/TAs, who gained considerable confidence and broadened their perspectives. This project, which originated from an AASCU (American Association of State Colleges and Universities) grant has now received temporary, internal funding from the Provost and is part of a pending application for presidential funding.</i>	◆ General
	CC Theatre	*Roessel, David – ARHU Shilo Previti Michael Simons Jamie Walters Angel Cordero Dylan Carr	Writers, Dreamers, Drifters and the Aegean: Swimming Rocks, Hydra, Greece <i>Professor Roessel's students synthesized a series of comparative performances using the literary works of Australian authors Charmian Clift and George Johnston to understand the way in which the married couple's perspectives of life on the island of Hydra differed and how their relationship suffered as a result. Clift and Johnston's interpretations of the Spilia swimming spot, written by Shilo Previti, is performed by Shilo Previti and Mike Simons.</i>	◆ Literature

10:35 – 11:00

CC1	Ferri, Christine – SOBL Morell, Nathan Kalibatseva, Zornitsa Julie Coker Haley Caporrino	Suicide Prevention Efforts at Stockton University <i>Presentation will review the results of the 2017 and 2018 Depression Screening Program and make recommendations about ways to meet the mental health needs of college students.</i>	◆ Health
CC2	Pearlstein, John – BUSN	Team Formation in the Classroom <i>Experiential Exercise in project team formation that creates teams that students perceive as more cohesive and better performing than other methods. Results of empirical testing will be shared along with instructions and worksheets to show you how to implement exercise in your own classrooms.</i>	◆ Pedagogy
CC5	*Ludovich, Joe'l – ARHU Laura Cranwell Melissa Tucker Mike Zubrzycki	"Grounds for Graffiti" <i>This documentary explores the art of graffiti in Philadelphia from the perspectives of the graffiti artists. It also examines the social, economic, and cultural aspects of graffiti art and the stigma surrounding it as a legitimate artform.</i>	◆ Art

11:05 – 11:30

CC1	*Fahey, Susan – SOBL Levy, Marissa – SOBL	Paradise Now: Assessing the impact of film pedagogy on Criminal Justice students. <i>The purpose of this research is to examine the impact of viewing a film, Paradise Now, on attitudes towards terrorism in a class of Criminal Justice students, using a survey adapted and modified from previous research. The film itself follows two young men who are offered the opportunity to engage in terrorism while also showing the human side of war, poverty, oppression, and at times, the power of religion.</i>	◆ Social Issues
CC2	**Tartaro, Christine – SOBL	Evaluation of a jail-based methadone treatment program <i>The Atlantic County Justice Facility is working with a drug treatment provider to provide opioid-addicted inmates with methadone while they are incarcerated. The researcher has been collecting data about participants' involvement in post-release treatment and recidivism.</i>	◆ Social Issues
CC3	*Morfit, Jedediah – ARHU	Sculpture in the Digital Age <i>This presentation describes work begun during of a 2017 sabbatical investigating the integration of digital 3D software and fabrication with traditional sculptural media and techniques. Unusual 3D Printing and CNC applications will be discussed, as will the future of sculpture in general.</i>	◆ Art
CC Theatre	*Pittenger, Caitlin – ARHU Smith, Mariana – ARHU Jenny Husta Jaclyn Salerno Morgan O'Shea	Passage <i>Passage is an interdisciplinary experimentation and collaboration with visual artist, Mariana Smith, and choreographer, Caitlin Quinn Pittenger, bringing together video projection and dance. The work addresses the nature of immigrant dislocations, based on a fragmented collection of memories.</i>	◆ Art

11:35 – 12:00

CC1	Lyke, Jennifer – SOBL Roseanne Johnson	<p>The Frequencies of Psi Experiences and Entity Encounters in Spontaneously Reported Self-Transcendent Experiences</p> <p><i>This presentation summarizes ostensibly paranormal experiences and entity encounters in 236 spontaneously reported self-transcendent experiences. Fourteen percent of the accounts included reports of telepathy, clairvoyance, or precognition while 19% described encounters with entities, including apparitions, angels, other spiritual beings, dead relatives, and miscellaneous beings.</i></p>	◆ Science
CC2	Rosen, David – SOBL Trey Brasher	<p>Ego Dissolution Experiences as a Moderator of the Mortality Salience Effect</p> <p><i>The Mortality Salience Effect is the idea that unconscious awareness of death causes behavioral and social effects because of death anxiety. Previous psychedelic experiences marked by ego dissolution may moderate this effect by decreasing death anxiety.</i></p>	◆ Health
CC3	*Murphy, Kameika – ARHU	<p>Public Debates on Black Military Corps during the Haitian Revolution</p> <p><i>This paper traces the movement of African America military corps (Black pioneers) from the United States to the Caribbean and explores political tensions in Jamaica surrounding their service during the Haitian Revolution. Black pioneers were a unique group of service men and women (mostly ex-slaves) who gained firsthand experience of both the American and Haitian revolutions. The paper argues that while the pioneers' prior exposure to ideologies of the American Revolution were first perceived as nonthreatening, the Haitian Revolution's challenge to slavery as an institution changed public perceptions of their presence in a Caribbean slave society dramatically.</i></p>	◆ Art
CC Theatre	Miller, Richard – GENS	<p>Successful Relationships</p> <p><i>Research indicates that relationships affect success! According to Buscaglia, Pliskin, Twerski and others, one's relationship at home, school, work and in the community can make a difference in one's life! Research, stories and exercises will demonstrate the need to sharpen one's skills in one's relationships!</i></p>	◆ General

12:05 – 12:30

CC1	*Madan, Manish – SOBL Tyler Black	<p>Examining Gender Differences and Views about Sexual Harassment in College Students <i>In the past few years, sexual harassment has gained attention nationally as well as internationally. #MeToo campaign has furthered public discourse not only on social media platforms but also in public domains such as work places, news and media, and importantly within college campus communities. Employing survey methodology at a mid-size University in New Jersey, this study examines views about sexual harassment among college students and corresponding gender differences. Further, this study also analyzes self-reported data on both the victimization and offending patterns of sexual harassment among college students. Policy implications from this study are discussed.</i></p>	◆ Social Issues
CC2	Dissen, Anthony – HLTH	<p>Assessing Undergraduate College Students’ Ability to Evaluate the Quality of Web-Based Sources of Health Information <i>Within the fields of political science and journalism, there has been a great deal of discussion and study about the concept of “fake news” and “alternative facts”, especially in recent years, and this is equally true of web-based sources of health information. This study examined the ability of undergraduate students to assess the quality and accuracy of web-based sources of health information, with results showing that students currently do not possess the skills necessary to evaluate the validity and accuracy of these resources.</i></p>	◆ HLTH
CC3	Paige, Garrison - GENS	<p>Mask Off! Unveiling Agency Reducing Identities within the Diasporic African Community <i>In previous scholarship Agency Reduction Formation was interrogated through a lens of political inaction; this work adds the component of language and the rhetoric of Diasporic Africans to the conversation as aggressive forms of Agency Reduction Formation. It expands the application; targeting African people linguistic creations and rhetorical objectives i.e. bridging the gap between word association and the creation of archetypes, identities, and personas.</i></p>	◆ Social Issues

12:05– 1:00

CC5	Rosenthal, Gail – GENS Hannah Sandler Hannah Gettings Anh Le Diana Sanchez Zevallos	<p>How was the pathway to WWII created and who were some of the victims? <i>Research outlining the contributing factors that led to WWII and the experiences of victims during the Holocaust.</i></p>	◆ History
-----	-------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----------

◆ Learning

◆ Engagement

◆ Global Perspectives

◆ Sustainability

◆ Research

12:35 – 1:00

CC1	*Cox, Lisa – SOBL Maguire, Gina - SOBL	Positive Aging: Recipes for Success <i>Stories about positive aging experiences will be shared. Additionally, pedagogical resources from a newly published book will be presented to help teach about important life themes humans experience across the life course (e.g. family, money, food & celebrations, death, etc.)</i>	◆ General
CC2	Joseph, Janice – SOBL	Invisible Victims of Islamophobic Violence: The Intersection of Gender, Race, and Religion <i>Islamophobic violence against Muslim women is not uncommon in several countries around the world. Such experiences are seldom reported and if reported they are ignored. To understand this form of victimization, it is necessary to examine the multiple identities and marginalization of Muslim women in many societies.</i>	◆ Social Issues
CC3	Song, Xu (Bevin) – ARHU Andrea Aponte Kathryn Jeschon	Global Community Public Relations Case Study: Assessment and Investigation of "My Blood is Red & Black" Hemoba Foundation Blood Donation Campaign <i>This research study examines the blood donation campaign launched by the Hemoba Foundation of Bahia, Brazil and the Leo Burnett advertising agency. The ROSTE (Research, objectives, strategies, tactics, and evaluation) public relations research model was applied in this study to evaluate the process and implementation of this international cross-culture public communication campaign. Research findings suggest that the target public lacks motivation to donate blood unless a person with strong community image is involved. Through the campaign, successful outcomes were produced and observed. Community-involving tactics and strategies were analyzed and discussed for future global public communication campaigns.</i>	◆ Social Issues

Time	Presenter (s)	Title	Discipline
9:00 – 10:00 Campus Center Main Event Room – POSTER PRESENTATIONS (view all day)			
	Chang-Fitzgibbon, Kerry – Library Fazio, Patricia – Library	Cited References and Altmetrics -- what researchers need to know <i>In this poster, we highlight the differences between Altmetrics and Cited References. Altmetrics are useful tools to identify trending research and potential research partners for future collaboration. In contrast, it usually takes years to see the impact of an article in citation indexes. In recent years, several sources list the number of cited references with the article. Come and see which sources are better for evaluating research or tenure applications.</i>	 General
	*Culleney, Stacey – EDUC	Tracking Career Readiness in K-12 Teaching <i>Proactive and purposeful precepting is crucial within the School of Education as students must meet a multitude of standardized testing requirements, fieldwork mandates, and instructional proficiency per state performance assessments. Through the support of the 2017 Provost's Professional Development Award in Faculty Precepting, a comprehensive advising model has been developed to meet the needs of the teaching career's readiness.</i>	 Education
	*DelRossi, Lauren – HLTH Ziwei Li	A multi-year, mixed methods assessment of student competency within a pediatric interprofessional education experience. <i>This study was designed to measure student performance on objectives based on the IPEC core competencies over 3 sequential years of Baby Lab (BL) with students of different, progressive cohorts. We hypothesized that BL would be a beneficial learning experience for all students regardless of discipline. Partners: Lauren Del Rossi, PT, DPT, PCS, ATP; Monika Pawlowska, PhD; Mary Padden, PhD, APN-C; Mary Kientz, OTD, OTR, Patricia McGinnis, PT, PhD</i>	 Health
	*Enriquez, Carla – HLTH Tracy Wong	Is There Association Between Demographic and Psychosocial Profiles, and Pain Processing Mechanisms in Healthy Adults? <i>Various demographic and psychosocial characteristics influence individual pain perception and response. This study aims to investigate the collective relationship of these variables in pain neurophysiology and pain processing mechanisms that influence overall pain experience among healthy individuals. Credited partner: Dr. Carla Enriquez</i>	 Health
	Frank, Michael – SOBL Melissa Becker Kenzie Hoinkis Brandy-Lee Morris Alexandra Price	Is There a Relationship Between Speed on Exams and Students' Grade? <i>Over 80 Students were given 5 multiple choice exams and the order of finish was correlated with the grade on the exam. Results indicate a very weak, but moderately consistent negative relationship indicating that quicker finishers tended to get marginally higher grades.</i>	 Education

Dry Needling and Upper Trapezius Myofascial Trigger Points

We explored if the use of Kinesiotape (KT) with Complex Decongestive Therapy (CDT) was more effective in reducing lymphedema in patients who have had a mastectomy versus CDT alone. This condition is prevalent in women with breast cancer following a mastectomy. Primary treatment for the lymphedema is CDT and includes skin care, manual lymphatic drainage (MLD), exercise, and compression therapy with a multilayer bandage or garment. Based on our research findings, treatment protocols varied and KT was not found to be beneficial when used alone to treat lymphedema in patients post mastectomy. Further research is needed.

Dry Needling and Upper Trapezius Myofascial Trigger Points

We reviewed studies implementing a dry needling technique for pain management. Our results note a reduction in pain intensity and hyperactivity of myofascial trigger points in the upper trapezius, especially when dry needling is used in conjunction with exercise and stretching. Therefore, this modality incorporates high level of evidence for management of neck pain associated with muscle trigger points and tightness.

Does yoga therapy improve social interaction in pediatric patients with social behavioral concerns associated with Autism Spectrum Disorder compared to exercise intervention provided in physical therapy?

Autism Spectrum Disorder (ASD) is now regarded as the most common neurological and developmental disorder in children and social deficits associated with this disorder lead to maladaptive behaviors, including social isolation and irritability. We explored the use of yoga to combat these behaviors and compared it to general exercise programs prescribed in physical therapy. Although the literature is limited, the utilization of both of these intervention strategies is promising.

Wet Cupping for Chronic Low Back Pain

Traditional wet cupping therapy is a safe modality with the potential to reduce current pain associated for individuals with chronic low back pain. Cupping therapy has the potential to be more effective as a treatment combined with usual care compared to UC or acetaminophen alone. Wet cupping therapy is beneficial for clinical short-term benefits for pain relief compared with usual care without adverse effects reported after treatment.

Instrument Assisted Soft Tissue Mobilization (IASTM) and Hamstring Pathology

The addition of instrument assisted soft tissue mobilization (IASTM) is an effective technique to increase tissue extensibility. Improvements in range of motion in patients with hamstring pathologies compared to an alternative PT approach was found in our research. Treatment with IASTM tools such as Ergon and Graston techniques, and IASTM combined with Total Motion Release (TMR) showed significant improvement in hamstring ROM, movement dysfunction, and tissue extensibility.

Does Blood Flow Restriction Therapy facilitate greater strength gains in quadriceps as compared to traditional strengthening protocol in adults ages 20-70 years?

Blood flow restriction is a method of decreasing or occluding blood flow to a muscle/muscle group to promote hypertrophy and prevent atrophy. We reviewed studies comparing traditional strengthening methods to strength gains with blood flow restriction. We found that Blood Flow Restriction Therapy exercising with low loads was equal if not better than traditional strengthening with heavy loads/high intensity.

Post-Concussion: Benefits of Vestibular Rehabilitation and Cognitive Rest

The purpose of our research was to determine the relationship between cognitive rest and vestibular rehabilitation therapy (VRT) for individuals between 10-30 years of age post-concussion. Overall, the literature establishes a standard plan of care should include 1-2 days of strict cognitive rest followed by gradual return to activity and incorporate VRT for prolonged symptoms. Additional studies, however, need to be performed to determine whether or not VRT is a necessary intervention for all individuals post-concussion.

Detecting MBT, Flavor Profiles in Beer

The presence of MBT (3-methyl-2-butene-1-thiol) causes an undesirable off-flavor in beer. To identify and quantify the presence of MBT in beer, a UV/VIS spectrophotometry method is being developed which reacts MBT with an indicator and measures the change in absorbance. Credited Partners: Sarah K. Zingales, Georgia Southern University, 11935 Abercorn St. Savannah, GA 31419

Developing Nanoporous Semiconductor Thin Films for Water Splitting Applications

This research aims to create uniform nanoporous semiconductor thin films using cost-effective, simple solution chemistry to enhance the efficiency of hydrogen evolution from water. We successfully synthesized and characterized solution processed MoS₂ and WS₂ thin films. In an effort to create nanoporous structure, we successfully developed large area self-assembled polystyrene microspheres as a sacrificial template.

Atlantic City Focus Groups on Cardiac Risk & Resiliency Factors

This is a qualitative study investigating the health-related perspectives and beliefs of low-income urban residents at risk of cardiac disease. Three focus groups were held in spring 2018, collecting information on the perceptions of low-income individuals on their own risks of heart disease, their barriers to meeting those needs, and how they address those barriers. We plan to use the findings as part of planning for a group intervention focusing on peer support, nutrition, exercise, and stress reduction. The project is in partnership with the Atlanticare HealthPlex. Atlanticare co-principal investigator is Inga Robbins, MD, and co-investigators include a multidisciplinary multi-institutional team.

Examining the Mathematics Identities of Developmental Mathematics Students

This study examines how developmental students' general and mathematical experiences help to shape the mathematical identities they develop and how these identities in turn hinder or enhance their successful participation in mathematics. Also examined are the factors that influence students' mathematics identities after taking a developmental mathematics course.

Does work impact pregnancy outcomes?

The purpose of the study was to identify the association between occupational factors and pregnancy outcomes in females within reproductive age group (19-39 years) in the United States. We examined cross sectional survey data from NHANES (National Health and Nutrition Examination Survey) between the years 2003 and 2006. After adjusting for the study variables, we observed data for 2,290 participants.

Opioid Awareness in Cape May County

In order to address the Opioid Crisis, community awareness of: 1) the clinically appropriate use of opioids; 2) risks of addiction; 3) negative health consequences of use; and 4) harm reduction techniques was measured through a survey of Cape May County residents. Results indicate that while risks of addiction are generally known, there are gaps in community awareness of medically indicated uses of opioids and methods to reduce the harm of abuse.

How Globalized is your Listening?

This project was developed to assess the baseline cultural competence of students regarding their knowledge of different accents. Through a game-based format, the study attempts to identify baselines for students to see how well they can identify where a person is from based on their regional or foreign accents. This program is being integrated into classes at Stockton University as part of a systematic effort to develop increased cultural competence and globalization skills in dealing with a diverse array of accents and speech patterns.
